Taimoor Ali Yaqoob Baig

DEVOPS ENGINEER

taimoormirza646@gmail.com | +92 336 4598241 | Lahore, Pakistan | linkedin.com/in/taimoor-ali-77396b186

Summary

DevOps Engineer with 2+ years of experience designing and managing cloud infrastructure, CI/CD pipelines, and data platform tooling across AWS, Azure, and GCP. Skilled in Kubernetes-based platform engineering, infrastructure automation, and supporting data engineering and analytics teams with reliable, secure, and scalable infrastructure. Adept at working independently and cross-functionally to improve deployment reliability and operational efficiency.

Work Experience

DevOps Engineer — Vroozi

Jun 2026 – Present

- Manage and maintain AWS cloud infrastructure and production environments, ensuring high availability and reliability.
- Build and optimize CI/CD pipelines using Jenkins, GitLab CI/CD, and Rundeck for automated job scheduling and deployment workflows.
- Implement Infrastructure as Code using Terraform and AWS CloudFormation to standardize and automate infrastructure provisioning.
- Monitor application performance, security, and system availability using New Relic, proactively identifying and resolving incidents.
- Support containerized deployments using Docker and cloud-native services, streamlining release cycles.
- Drive infrastructure automation initiatives across environments to reduce manual operations and improve deployment consistency.

DevOps Engineer — DatumLabs

Jan 2026 – Jun 2026

- Managed multi-cloud infrastructure across AWS, Azure, and GCP, with Kubernetes as the core platform layer supporting data engineering and analytics teams.
- Designed and maintained a multi-layered data pipeline architecture (Staging, Intermediate, Mart, Merged, Index layers) integrating sources such as Yardi, Entrata, RealPage, ResMan, Zoho, and SharePoint into PostgreSQL.
- Built and orchestrated data workflows using Dagster and Airflow, with Airbyte for data ingestion and integration.
- Enabled self-service analytics and BI through Metabase and Hex, supporting data analysts and business stakeholders.
- Administered HashiCorp Vault on GKE for secrets management, including scoped policy creation and userpass auth configuration.
- Developed and maintained CI/CD pipelines for application delivery and implemented monitoring, logging, and infrastructure best practices.
- Worked closely with development and data teams to improve deployment reliability and optimize cloud resource utilization.

Associate DevOps Engineer — Yellow Beam Technologies

Jun 2024 – Dec 2025

- Administered over 100 Elastic Beanstalk environments with 400+ EC2 instances, multiple ALBs, RDS, VPCs, EBS, S3, and EFS, all secured with KMS encryption across multiple AWS accounts.
- Experienced with Linux (Ubuntu) and proficient in using Git for source code management.
- Skilled in managing server-side technologies like Nginx and deploying infrastructure using IaC tools like Terraform and AWS CloudFormation templates.
- Developed and maintained automated CI/CD pipelines for code deployment using AWS, GitLab DevOps, and Jenkins.
- Built and deployed Docker containers, and worked with AWS services such as S3, ECR, ECS, EC2, IAM, VPC, CodeBuild, CodeDeploy, and CodePipeline.

- Proficient in managing infrastructure and deploying applications in cloud environments, optimizing workflows and ensuring smooth deployment.

DevOps Intern — Yellow Beam Technologies *Feb 2024 – May 2024*

- Gained experience in cloud infrastructure management with AWS and Azure using CloudFormation, and automated tasks with shell scripts for system updates and backups.
- Set up monitoring and logging systems with AWS CloudWatch to optimize workflows and proactively identify performance issues.
- Proficient in Git for version control, Docker for container orchestration, and gained hands-on experience with cloud provisioning and DevOps practices.

Data Science Intern — CodSoft *Oct 2023 – Nov 2023*

- Assisted in building, fine-tuning, and maintaining machine learning models and Python code for various AI-related projects.
- Collected, cleaned, and preprocessed large datasets, ensuring successful completion of tasks within deadlines and quality standards.

Technical Support / Web Developer — Aquila Tech | Digital Agency *Jul 2022 – Sep 2022*

- Managed a team of 20 for the IN4OBE Global Virtual Summit 2022, coordinating event scheduling and creating forms for websites using PHP, Laravel, and Angular.
- Conducted testing on web and mobile applications, integrated new features, and collaborated with developers to enhance UI and resolve performance issues.

Skills

Cloud Platforms: AWS, Azure, GCP

Container Orchestration: Kubernetes, Docker, Amazon ECS, AWS Fargate

Data Orchestration & Analytics: Dagster, Apache Airflow, Airbyte, Metabase, Hex

CI/CD & Automation: Jenkins, GitLab CI/CD, AWS CodePipeline, Rundeck

Infrastructure as Code: Terraform, AWS CloudFormation, Ansible

Monitoring & Security: New Relic, AWS CloudWatch, HashiCorp Vault, KMS

Scripting & Languages: Python, Bash, C++, MySQL, JavaScript, Java, PHP, Laravel

Other: Excellent interpersonal and written communication skills; able to translate complex technical concepts into non-technical terms; quick to learn new tools and approaches

Certificates

- CKA: Certified Kubernetes Administrator — credly.com/badges/9fc175fe-60ff-4709-937b-8aca760c8282
- Great Learning — Introduction to DevOps
- Cognitive Class — Docker Essentials: A Developer Introduction
- KodeKloud — DevOps Pre-Requisite Course
- KodeKloud — Jenkins

Education

Lahore Garrison University, Lahore — BS Computer Science *2020 – 2024*
